For immediate release

ACD signs an exclusive agreement with Global Systems, llc for Mexico, Caribbean, and Central and South America.

Effective April 1, 2007, ACD will no longer use multiple distributors to market and sell pump products and spare parts in the Mexican, Caribbean, and Central and South American markets. As part of an aggressive strategy to improve customer coverage for both new products and overall pump related services, ACD's new sales and service plan will include an exclusive agreement with Global Systems, llc ("Global Systems") to market and sell ACD pump products and spare parts. ACD, in conjunction with Global Systems, plans to establish a sales and service center in Brazil.

Establishing an ACD controlled facility in Brazil follows Cryogenic Industries' group strategies re: supporting regional activities. The Latin American market place is one region where ACD products are active without a sales and service center. The primary purpose of establishing this new location is to facilitate local repair services, carry spare parts inventory, and provide technical support for ACD pumps and general cryogenic pump applications.

Global Systems will represent ACD as their exclusive sales and marketing team for the Mexico, Caribbean, and Central and South American markets. Global Systems has all rights associated with an exclusive agreement and allowed to use ACD's trademark, sales brochures, and general literature to represent ACD's product line and overall services. No other company, individual, or group is authorized to market and sell ACD products and spare parts in Mexico, Caribbean, and Central and South America.

ACD is an original equipment manufacturer of cryogenic pump systems and turbo-expanders. ACD is a member of Cryogenic Industries and has 12 worldwide sales and service locations to provide equipment sales, service, spare parts, and training for all ACD products. For more information about ACD products, visit their website at www.acdcom.com or contact any ACD sales and service location in your region.
